

## Public Comment Summary: Town of Cathlamet Locally Approved SMP

### Ecology Public Comment Period: October 25 – November 30, 2017

*Summary prepared by Michelle McConnell, WA Dept. of Ecology; December 5, 2017*

*Town response submitted January 17, 2018*

Comment Number	Topic / Section	Commenter	Comment – Summarized*	Local Government Response & Rationale
1	General	WA Department of Fish & Wildlife, G. Fornes (WDFW)	Generally supportive of the Locally Approved SMP Final Draft as proposed	The Town has reviewed the comments from WDFW and have no issue with any of the comments.
2	ICR Mapping	WDFW	Priority habitats & species (PHS) data depicted in ICR Appendix E Map 27 does not match WDFW records, specifically for Columbian white-tailed deer and cavity-nesting ducks; revise the map per WDFW info/consult on such in-Town locations.	The Town supports the request by WDFW to revise the maps as depicted to match those maintained by WDFW.
3	ICR Mapping	WDFW	ICR Appendix E Map 27 PHS color scheme and polygon alignment used to depict various types could be improved for clarity and accuracy.	The Town has no issue with the suggestion of improving the PHS color scheme used in ICR Appendix E Map 27.
4	Fish & Wildlife Habitat Conservation Areas (F&WHCAs) SMP 6.12	WDFW	Table 6 F&WHCA Classifications (1) Description – Wording should be revised as: “...other waters <del>where used by</del> salmon <del>redds are present,</del> ” in order to ensure all habitat associated with a listed salmon species is included.	The Town agrees with changing the wording in Table 6 F &WHCA Classifications (1.) as suggested by WDFW.
