

Dept. of Ecology  
2018 Reissuance - Phase I & W. WA Phase II Municipal Stormwater Permits  
3/2/17 Lacey  
3/14/17 Vancouver

## Consideration: Watershed-scale stormwater planning

- Do you see value in developing a watershed-scale stormwater plan to inform your SW Program?
- What are different ways that Permittees could potentially use prioritized watersheds/drainage basins to help inform SWMP implementation? [capital projects, education and outreach, source control, etc.]
- What are some potential data gaps to developing this plan?
- What guidance or resources would you like to see provided and why?

## Consideration: Business inspection source control program for Phase II

- Do you see value in adding a business inspection source control program to Phase II city and county stormwater management programs? Please elaborate.
- What changes, if any, to Phase II jurisdictions' local codes must be made in order to ensure local authority to require the use of stormwater pollution prevention BMPs at existing businesses? How much time would that take?
- How would you develop an inventory of potentially pollutant generating commercial properties and/or businesses in your jurisdiction?
- What guidance or resources would you like to see provided and why?
