These three rules adopt by reference some provisions from Chapter 173-400 WAC applicable during startup, shutdown, and malfunction (SSM). The following SSM provisions in Chapter 173-400 WAC would take effect on the effective date of Environmental Protection Agency’s (EPA) removal of WAC 173-400-107 from the Washington State Implementation Plan (SIP):

- Alternative opacity emission standards for:
  - Soot blowing and grate cleaning,
  - Startup and shutdown of hog fuel or wood-fired boiler with dry particulate matter controls, and
  - Furnace refractory curing.

The following provisions remain in effect until EPA removes WAC 173-400-107 from the SIP:

- Unavoidable excess emissions – WAC 173-400-107, and
- Exemptions from opacity emission standards for soot blowing/grate cleaning and orchard heating.

The primary purpose of this revision is to align these three statewide rules with the General Regulations for Air Pollution Sources (Chapter 173-400 WAC), the federal Clean Air Act (CAA), and EPA SSM policy.

The CAA and EPA’s SSM policy require emission standards to apply continuously without automatic or discretionary exemptions, even during periods of SSM. Contrary to the CAA requirements and EPA SSM policy, Chapter 173-400 WAC exempted or allowed a source to avoid an enforcement action for exceedances of emission standards during periods of startup, shutdown, and scheduled maintenance (80 F.R. 33840). EPA determined WAC 173-400-107 had overly broad enforcement discretion that potentially barred enforcement action by EPA and citizens in federal courts (80 F.R. 33840). On August 16, 2018, Ecology adopted amendments to Chapter 173-400 WAC to correct EPA-identified deficiencies, and meet the CAA requirements and SSM policy that allow comprehensive enforcement of applicable requirements.

This rulemaking harmonizes Chapters 173-405, 173-410, and 173-415 WAC with Chapter 173-400 WAC through adoption by reference of the SSM related provisions to:
- Remove impermissible provisions that shield sources from civil penalties for excess emissions during startup, shutdown, and scheduled maintenance.
- Establish alternative emission standards for soot-blowing and grate cleaning, refractory curing, and startup and shutdown of hog-fuel boilers with dry particulate controls.
- Outline the process for establishing facility-specific alternative emission limits for specific short-term operation modes like SSM that exceed the otherwise applicable emission standards in the SIP.
- Simplify the excess emission notification and reporting requirements.

We also made other amendments that include:

- Extending the time allowed for submission of source testing reports to 60 days instead of 15 days for pulping mills and 30 days for primary aluminum plants. We did this to provide a more realistic timeframe to complete and submit a source test report to Ecology.
- Deleting provisions that are outdated and not applicable to facilities covered by these rules.
- Correcting typos and citations, and clarifying rule language without changing the intent of the rules.

Citation of rules affected by this order:
New: WAC 173-415-075
Repealed: 0
Suspended: 0

Statutory authority for adoption: Chapter 70.94 RCW Washington Clean Air Act, RCW 70.94.395
Other authority: N/A

PERMANENT RULE (Including Expedited Rule Making)
Adopted under notice filed as WSR 18-22-124 on November 07, 2018 (date).
Describe any changes other than editing from proposed to adopted version: For more details, refer to the Concise Explanatory Statement at https://fortress.wa.gov/ecy/publications/summarypages/1902007.html.

WAC 173-415-030 Emission Standards
- (7) After considering the public comments on the proposed rule, Ecology decided not to adopt the amendments in WAC 173-415-030(7) that are related to performance testing frequency for secondary total fluoride (TF) emissions from potlines of primary aluminum plants. We decided this in order to achieve the primary purpose of this rulemaking within our established timeline. The primary purpose of this rulemaking is to align the three rules with the new SSM requirements adopted in the Chapter 173-400 WAC, the CAA, and EPA’s SSM policy. Ecology will continue to evaluate the options to address fluoride emissions monitoring frequency in a future action, in a manner that protects human health and the environment and meets the needs of the stakeholders.
