

**WHEN YOU'RE WASHING
YOUR CAR IN THE DRIVEWAY,
YOU'RE NOT
JUST WASHING YOUR CAR
IN THE DRIVEWAY.**

Storm drains run directly into lakes, rivers or marine waters. When you wash your car in your driveway, the soap can go down the storm drain and pollute our waters.

**Don't feed soap to the storm drain.
Wash your car right. Keep your waters clean.**

A message from the Washington Departments of Ecology, Health, Washington Parks & Recreation Commission, Washington Conservation Commission, Puget Sound Partnership, WSU Extension Service, U.S. Environmental Protection Agency and Thurston County Stream Team.

When you're washing your car in the driveway, you're not just washing your car in the driveway.

Clean water is important to all of us. It's up to all of us to make it happen. In recent years sources of water pollution like industrial wastes from factories have been greatly reduced. Now, most water pollution comes from things like cars leaking oil, fertilizers from farms and gardens, and failing septic tanks. All these sources add up to a big pollution problem. But each of us can do small things to help clean up our water too. And that adds up to a pollution solution!

Why do we need clean water?

Having clean water is of primary importance for our health and economy. Clean water provides recreation, commercial opportunities, fish habitat, drinking water, and adds beauty to our landscape. All of us benefit from clean water and all of us have a role in getting and keeping our lakes, rivers, marine and ground waters clean.

What's the problem with car washing?

There's no problem with washing your car. It's just how and where you do it. Most soap contains phosphates and other chemicals that harm fish and water quality. If you live in the city and you wash your car in the driveway, the soap, together with the dirt and oil washed from your car, flows into nearby storm drains which run directly into lakes, rivers or marine waters. The phosphates from the soap can cause excess algae to grow. Algae look bad, smell bad, and harm water quality. As algae decay, the process uses up oxygen in the water that fish need.

How will we change our ways?

The state recommends that cities and counties help educate people in urban areas about sensible ways to wash their cars and still keep soapy water from washing into storm drains. You can, indeed, wash your car and you can also keep our waters clean!

Car washing soaps don't have to be a problem.

What will you do to help?

- ◆ Use a commercial car wash, either self-serve or machine wash.
- ◆ Wash on lawns or other surfaces where water can seep into the ground.
- ◆ Divert water away from storm drain.

Charity Car Washes

- ◆ Sell commercial car wash coupons instead
- ◆ Borrow a pump kit to send the soapy runoff to a sanitary sewer
- ◆ Locate the wash to divert wash water into the sewer, not the storm drain
- ◆ Rent a "Bay for a Day" at a self-serve car wash that is hooked up to sanitary sewer.

Don't feed soap to the storm drain. Wash your car right. Keep your waters clean.

We all need clean water.

We drink it, fish in it, play in it. We enjoy all it adds to our lives. In fact, we need it to survive. Fish and wildlife do, too.

More than 60 percent of water pollution comes from things like cars leaking oil, fertilizers and pesticides from farms and gardens, failing septic tanks, pet waste, and fuel spills from recreational boaters.

All these small, dispersed sources add up to a big pollution problem. But each of us can do small things to help clean up our waters too—and that adds up to a pollution solution!

Bonus points!

Cleaning your car the right way also helps you:

- ◆ Support a healthy watershed.
- ◆ Help restore salmon runs.
- ◆ Sets a good example for your children and your neighbors.
