

Plain text description of Boeing Auburn site map

Boeing Auburn groundwater contamination on map shows a plume that starts at the north end of the Boeing Auburn facility and stretches east to C St SW, close to highway 167 to the west where it also crosses into northwest Algona residential areas. It then crosses highway 18 up into the City of Auburn.

Arrows show the direction of groundwater flow from the Boeing Auburn facility both north toward Highway 18, and northwest toward the Outlet Collection mall.

The entire plume is highlighted as an intermediate zone (TCE location is 35 to 75 feet deep). On top of the whole plume, there are shallow zones (0 to 35 feet deep). These are the 3 areas where TCE concentrations are high enough we considered bioremediation:

1. Area near the Boeing Auburn facility at Perimeter Road.
2. Area under the Outlet Collection mall near highway 18.
3. Area under northwest Algona residential neighborhood.

This site map is shown on Ecology's [Boeing Auburn webpage](#).
